"Allen's strength while executing the subtlest of details was their adeptness in providing inventive, well-thought-out solutions rather than challenges."

- Barry Winick, Winick Architects

Project Highlights

7,500 SF BEACHFRONT ESTATE

This new glass and steel beachfront estate features classic contemporary lines softened by natural wood and stone finish materials.

The entire first floor and podium deck "floats" on pillars eight feet above grade. Steel moment frames support large window and door systems, which maximize the surrounding views. Stone floor tiles in the interior flow through large sliding glass doors out to exterior patios, creating strong connections between the indoor and outdoor environment.

Great attention has been given to the building corners and window and door corners where wood joints and mitered corners need to be achieved and, overtime, maintain their desired look.
